Mrs. Anandini Medianty Nababan, who is often called Dhini, is a woman of genuine Batak blood. She was born in Medan, on April 13, 1993. She attended formal education from elementary to undergraduate in Medan. After graduating from the Computer Science Undergraduate Study Program at Universitas Sumatera Utara (USU), she continued her education in the Informatics Master Study Program at Institut Teknologi Bandung (ITB) by receiving a scholarship from Lembaga Pengelola Dana Pendidikan (LPDP).

Mrs. Dhini presented her thesis research in 2019 at the International Conference on Electrical Engineering and Informatics (ICEEI), one of the IEEE conferences, in Bandung. She had worked at Xtremax Bandung and PT. Sanggar Jaya Abadi as a software developer, now she is a programming instructor at Binus Center, in addition to being a lecturer at the Computer Science Undergraduate Study Program USU.

When Bu Dhini was young, she won several singing contests in Gereja Batak Karo Protestan (GBKP). She is still active as a song leader in the church until now. In addition, she also teaches Sunday school for children and youth at GBKP. Her other organizational activity is managing Mata Garuda LPDP.

Mrs. Dhini has attended several trainings, namely the Cisco Python Professional Academy Program and CCNA Network Engineer for Trainers from the Digital Talent Scholarship, as well as the Bina Nusantara In House Training Program in Implementation of Java. She realized that we should be grateful for everything that we have as it is a gift from God. Our job is to learn to be content and “to make the best of what we have”. Next, leave the results to the Creator because He knows what is best for us.

Making the best of what you have
